

2000/WB WEIGH BEAMS

- **Portable**
- **Low profile design**
- **1000 kg & 2000 kg capacity**
- **Lightweight**
- **Wide choice of indicators**

Features & benefits

@weigh weigh beams are the brightest solution to applications where you need high capacity weighing - but don't have space for a fixed scale. And when the job is done, these lightweight, portable units can be stacked against a wall or simply carried to the next task.

@weigh weigh beams are strong enough to withstand a two tonne load - yet light enough for one person to carry with ease. They require no setting up, just plug in the instrumentation and your 'scale' is ready to use right away.

'Made to measure' weighing for any load, because they can be adjusted to the size and shape of the load.

The beams can be used to weigh literally hundreds of different items. They are ideal for pallet truck/fork lift truck use and perfect for handling 'awkward' objects like large rolls of paper or odd sized pallets.

2000/WB

WEIGH BEAMS

Tough construction, manufactured in mild steel or stainless steel, the weigh beams are built to withstand heavy industrial use.

Stable character, the weigh beams incorporate a broad 'foot' area for maximum stability and they can also be adjusted for optimum levelling.

Options

Mild or stainless steel, the standard finish is mild steel with the option of all stainless steel construction with stainless steel load cells. The beams are suitable for mains or battery operation.

The beams are available with a choice of **@weigh**, weight indicators and counting machines and include a standard, flexible, conduit cable length of three metres.

Weigh Beam Specifications

Sizes

1200 mm x 100 mm x 60 mm
(Other sizes available on request)

Weight

2 x 11.4 kg

Capacities

1000 kg to 2000 kg

BW/BWS Indicator
